Professional Summary

Software Developer with expertise in building Full-Stack applications using React, TypeScript, Next.js, Node.js and ASP.NET Web API. Strong foundation in DSA with 500+ problems solved. Strong understanding of relational and NoSQL databases, data modeling, authentication, and backend security practices. Published a conference paper on IEEE Xplore.

Education

East Delta University, Chittagong, Bangladesh

Jan 2022 – Dec 2025

- Bachelor of Science in Computer Science and Engineering | GPA: 3.49/4.0
- **Coursework:** Object Oriented Programming, Data Structures, Algorithms, Database, Artificial Intelligence, Operating System

Technical Skills

Programming Languages: TypeScript, JavaScript, HTML5, CSS3, Python, C#, SQL

Frameworks: Next.js, React, Express.js, ASP.NET Web API, Redux, Zustand, OpenCV, NumPy, Pandas, Keras

Database Systems: PostgreSQL, MongoDB, SQL Server, Prisma, Entity Framework

DevOps & Tools: Git, GitHub, Docker, Postman, Render, JIRA, Claude, Cursor

Projects

ReelDash – Short-Video Sharing Platform | GitHub

- Designed and developed a modern short-video sharing platform delivering a **seamless** and **interactive** user experience.
- Built a responsive UI using **Next.js 15** and **Tailwind**, featuring an infinite-scrolling video feed, playback controls, subscriptions, and watch history.
- Implemented secure **JWT authentication** with **refresh token rotation** using HTTP-only cookies.
- Ensured strong type safety with **TypeScript** and **Zod validation**, reducing runtime errors by **60%**.
- Developed a media upload and processing pipeline using **Multer** and **Cloudinary**.
- **Technologies:** Next.js, TypeScript, Tailwind, Zustand, MongoDB, Cloudinary, Express.js, React Query, Render

Light Inn – Hotel Booking Platform | GitHub

- Developed a modern, full-stack hotel booking platform with a strong focus on user experience and maintainability.
- Built a **RESTful API server using Express.js** following **MVC architecture**, handling authentication, hotel listings, booking management, and payment workflows.
- Optimized hotel search queries with advanced filtering and sorting logic, reducing database query latency by **40%**.
- Integrated **Stripe** for secure and seamless payment processing within booking flows.
- Wrote **end-to-end tests using Playwright** to validate critical backend-driven user flows and ensure system stability.
- Deployed the API server on **Render** with automated **CI/CD** pipelines triggered by repository updates.
- **Technologies:** Express.js, TypeScript, MongoDB, Stripe, Render, Playwright, React.js

Additional Experience

Undergraduate Researcher, East Delta University – Chittagong, Bangladesh

June 2025 – Sept 2025

- Developed an automated Bangladeshi License Plate Detection and Recognition system using deep learning as part of an undergraduate thesis.
- Designed a hybrid OCR pipeline combining YOLOv8 and a custom EfficientNetB0 CNN with EasyOCR, improving recognition accuracy from 74% to 94.9%.

Participant, Learnathon 3.0, Geeky Solutions – Sponsored by Brain Station 23

Jan 2025 – Apr 2025

- Participated in an intensive training program focused on **project management** and industry best practices.
- Gained hands-on experience in **cross-platform development** and collaborative workflows.

Achievements

- Solved 500+ problems on Codeforces and LeetCode.
- Achieved **Runner-up** position at **Learnathon 3.0** with Flutter Stack.
- Published a conference paper on **IEEE Xplore**. DOI: 10.1109/ICECTE69292.2026.11429408
